

MINOR PROCEDURE TRAYS

DELIVERING QUALITY, CONVENIENCE AND EFFICIENCY

Medline® is one of the largest minor procedure tray manufacturers in the United States.

Efficiency, Value...

Single-use trays reduce the cost of in-house hospital assembly and reprocessing. Our trays were designed with the help of medical staff to streamline components and reduce waste. In addition, we maintain cost-efficient operations so that we can pass the savings on to our customer.

Standardization, Convenience

Instead of creating storage space for numerous items which are pulled again and again for similar procedures, a convenient Medline sterile Minor Procedure Trays is a single item pulled from a single location. Components are packaged in sequence of use, allowing the clinician to progress efficiently through procedures. Custom options are also available for specialized needs; ask your Medline representative for details.

Quality

Medline is ISO 13485 Registered. ISO certification is granted only after rigorous analysis of a company's quality systems.

Central Line Dressing Change Trays

Central Lines and their special care require an elevated attention to detail. This results in additional time necessary to properly change these dressings so that the risk of infection is minimized. MPTs streamline this process to reduce wasted time and componentry.

DID YOU KNOW

The Centers for Medicare & Medicaid Services (CMS) recently announced that Medicare will no longer reimburse hospitals for vascular catheter-associated infections. The provision is effective October 1, 2008. The ruling halts the practice of hospitals receiving higher payments for costs associated with treating patients with hospital-acquired conditions (HACs). The directive prevents hospitals from billing patients for HACs as well.¹

The Centers for Disease Control and Prevention (CDC) reports that there are 248,678 central line-associated bloodstream infections per year. These infections are both high cost and high volume. Although generally preventable, the Institute for Healthcare Improvement (IHI) estimates that of those people affected approximately 14,000 will die every year from central line-related bloodstream infections.²

Choosing a MPT with the correct antiseptic has never been more important than it is today. Medline's MPTs offer solutions for today's regulations with a full range of antiseptic choices including Chloraprep® and Chlorascrub™.

DYND74277 - I.V. Start Kit

Medline's I.V. Start Kits streamline your procedures. Components are conveniently assembled, sterilized and packaged to save valuable nursing time. Because there are fewer packages to open, the risk of contamination is greatly reduced. Available with or without gloves.

DID YOU KNOW?

Medline's MPTs are a great way to remain in compliance with the Infusion Nurses Society's (INS) Standards of Practice for catheter stabilization. Stock IV start kits featuring tubing securement devices such as Statlock® preserve the integrity of the access device and prevent catheter migration and loss of access. The IV start kits, which are packaged for aseptic technique, are also available in custom configurations.

DYNDE75020

The Case for Disposable Tourniquets

Studies have shown that reusable tourniquets can become contaminated with blood and bacteria.¹ These tourniquets can act as reservoirs of pathogenic organisms, such as *Staphylococcus aureus* and *E. coli*.^{1,2} One study found that this reservoir of bacteria existed in areas of a hospital where critically ill, injured, immunocompromised and postoperative patients were being treated.¹ Because it is impossible to disinfect a reusable tourniquet, the risk exists that the next patient on whom the tourniquet is used could become infected.¹ In light of these findings, it is recommended that hospitals use disposable tourniquets during procedures such as blood drawing and setting up IV lines.³

Medline Tubing Securement Devices

Medline tubing securement devices can be used wherever a tube or line is used on a patient. A simple cost effective product that helps prevent tubes/lines from becoming detached or shifted. When using a Medline tubing securement device, your facility can reduce costs by preventing unnecessary restarts and catheter complications. Medline tubing securement devices are individually packaged sterile, latex-free, hypoallergenic, easy to use and come in a variety of sizes to handle all of your tubing and line securement needs.

Streamline your procedures with Medline's MPTs. All the necessary components conveniently assembled in a compact, sterile package help you maximize efficiency in the E.R. and elsewhere. Our sharps-free Laceration Trays can help you comply with recent OSHA legislation focusing on caregiver safety. Why spend time searching for the required components?

DYNJ03018 – Laceration Tray (also shown on front cover)

DYNJ07600 – General Purpose Tray

DID YOU KNOW?

Need help conforming to the Joint Commission on Accreditation of Healthcare Organizations' (JCAHO) of National Patient Safety Goals pertaining to drug labeling on and off the sterile field? Try Medline's new standard Laceration Tray, DYNJ03018. The tray includes a surgical marker and labels to identify drugs that may be poured into medicine cups or basins within the tray. The marker and labels are also available for custom configurations.
