

Gelling Fiber Dressings

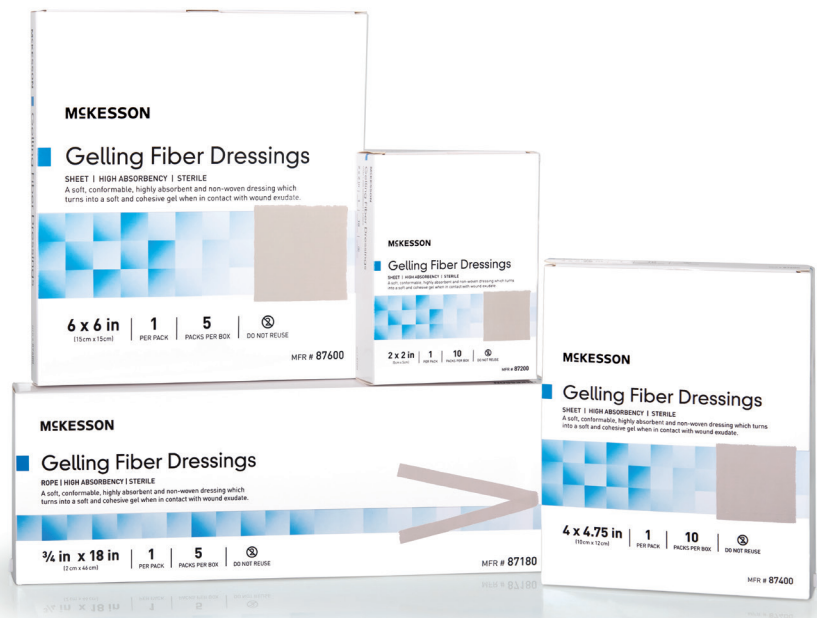

McKesson gelling fiber dressings are sterile, non-woven sheets/ropes composed of carboxymethylcellulose (CMC) and a high G (guluronic acid) calcium alginate that include a reinforcement layer to allow intact removal. McKesson dressings are soft and conformable, highly absorbent and high gelling. The dressings manage exudates in moderately to heavily exuding wounds and create a favorable environment for effective wound management. When in contact with wound exudates, these highly absorbent dressings form a soft gel which promotes a moist wound environment to assist in the healing process while also helping autolytic debridement.

Features and Benefits

- Highly absorbent
- Excellent wet and dry strength
- Supports moist wound environment for faster healing
- Low risk of maceration
- Unique quilting pattern
- Not made with natural rubber latex

Dressings may be used during the healing process on:

- Decubitus ulcers (pressure ulcers)
- Venous and arterial leg ulcers
- Diabetic ulcers
- Graft and donor sites
- Post-operative surgical wounds
- Superficial and partial thickness burns
- Cavity wounds
