Material Descriptions

Polypropylene

Spun bonded polypropylene is a lightweight, breathable fabric that provides economical protection against non-hazardous, grimy-work environment applications. It is the best low-cost solution for protecting workers against dry particulates, dirt and grime.

Laminated Polypropylene

Coated polypropylene has the added benefit of a solid sheet of polyethylene bonded to the surface providing protection where liquid splash is a concern. The polyethylene film is impervious and non-linting with great tensile strength. Great for pesticide spraying, asbestos and mold remediation, painting, light acid splash protection and any wet, general maintenance area. An economical solution for light non-hazardous splash protection.

SMS

SMS barrier fabric is a unique tri-laminate construction that offers a high tensile strength and toughness that is also soft, drapable and easy to work with. This material offers excellent barrier protection while keeping the worker cool and comfortable. SMS provides a fluid and particulate barrier to protect the worker without sacrificing mobility and comfort. Garments constructed of SMS fabric are strong and durable, yet offer outstanding comfort, breathability, softness and wearability. SMS is lightweight and resistant to tears and punctures.

Tyvek®

Tyvek is a spun bonded Olefin fabric that is made from high density polyethylene fibers that offer unique qualities of excellent barrier protection and strength. Tyvek® is lightweight and highly resistant to tears and punctures. Spun bonded Olefin is strong, lightweight, flexible, smooth, low-linting, opaque and resistant to water and chemicals. Tyvek® is an excellent choice for cleanroom apparel.

TA - a Tyvek® Alternative

TA fabric is a cost-saving alternative to Tyvek® that provides the worker with outstanding protection, durability and comfort. It is a microporous polyolefin fabric that is very effective everywhere Tyvek® is used.

Tyvek® is a registered trademark of DuPont™

OSHA Protective Clothing Regulations

According to the United States Department of Labor, the level of protective clothing required by employees in a high-risk situation depends on the amount of chemicals they encounter on the job. For example, individuals who work in a chemical manufacturing plant may have to wear more protective clothing than those who work in an agricultural environment. The clothing requirements may include protective suits, hard hats or hoods, gloves and boots. Select jobs may require eye or ear protection or respiratory equipment such as an air purifying respirator.

The FDA Food Safety Modernization Act (FSMA)

The most sweeping reform of our food safety laws in more than 70 years, was signed into law by President Obama on January 4, 2011. It aims to ensure the U.S. food supply is safe by shifting the focus from responding to contamination to preventing it.

Under the FSMA, facilities are required to develop food safety plans that evaluate food safety hazards, and identify the preventive measures to guard against those hazards. The plans must also describe how manufacturers will monitor their preventive measures to ensure they are working, and keep records of that monitoring. Manufacturers also must develop a plan of action to correct problems.

Personal Protective Equipment Summary

- Assess the workplace for hazards
- Use work practice controls to eliminate or reduce hazards before using PPE
- Select and provide appropriate PPE at no cost to employees to protect them from hazards that cannot be eliminated
- Inform employees why the PPE is necessary and when it must be worn
- Train employees how to use and care for their PPE and how to recognize deterioration and failure
- Require employees to wear selected PPE in the workplace
