

Anti-embolism stockings

McKesson anti-embolism stockings can help reduce the threat of blood clots forming in legs. Blood clots can form in anyone, but the threat of their formation is much greater during a hospital stay. McKesson anti-embolism stockings improve blood circulation in the leg veins by applying graduated compression. The stockings are designed for easy application and comfort while wearing. They are made of nylon/spandex with a graduated compression, inspection toe hole and a formed heel pocket. Color-coded for easy sizing.

Indications:

- To help prevent formation of deep vein thrombosis.
- To promote increased blood flow velocity in the legs by compression of the deep venous system.

Contraindications:

Stockings are not recommended for patients with the following:

- Any local leg condition in which stockings would interfere, such as dermatitis, immediate post-operative vein ligation, gangrene or recent skin graft.
- Severe arteriosclerosis or other ischemic vascular disease.
- Massive edema (swelling) of legs or pulmonary edema from congestive heart failure.
- Extreme deformity of leg.
