

KEEP SAFETY INSULIN INJECTIONS SHORT AND SIMPLE

microdot[®] ReadyGard[™]

Dual Safety Pen Needles

Safety Pen Needles 5mm/31G With Dual Automatic Protective Shields

Safety – Dual Protection

- Shield locks automatically at injection end after use to prevent accidental needlestick injuries
- Shield also locks automatically at insulin pen end after use
- Visible injection site so any leakage of insulin can be seen

Convenience

- Visible needle tip for ease of operation during priming and injection
- Minimal activation pressure required reducing pain and bruising

Universal Fit

- Compatible with all major brands of insulin pens and injection pens

STERILE | EO Sterile single-use

CS CAMBRIDGE SENSORS USA, LLC

Less steps improving efficiency

No cap to remove before use. No need to recap after use and before disposal.

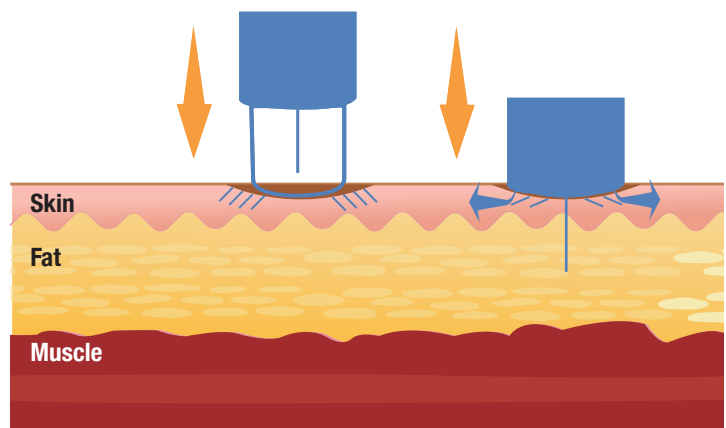

Injection comfort

The patented structure allows for a reliable and straight needle injection path, providing the patient with a more comfortable and smooth injection experience.

Controllable depth

A wider skin surface contact area not only improves patient comfort due to less pressure during injection, but also reduces the chances of intramuscular injection and ensures subcutaneous insulin deposit.

Vertical injection

Reduce injection-related anxiety and needle phobia

The microdot® safety pen needle has a front shield that covers the needle, reducing needle and injection-related anxiety before and after the injection. Dispose of in accordance with your facilities' or unit's procedure.
