Introducing the

PRO SPIN

Advanced Flat Mop System

**Now you can spin-dry your microfiber mop
and use it to clean 90 degree surfaces.**

ProSpin is a “touch-free” microfiber cleaning innovation that takes versatility and convenience to another level. ProSpin comes with a unique spin handle and frame that hinges 90 degrees on each end. This foldable frame allows the flat microfiber mop to be inserted in either the clean water-side of the bucket, or the spin basket for drying. Leave one end of the mop flipped up after drying, and you transform the handle into a specialty tool that cleans baseboards, stairs and other hard to reach vertical areas. Don’t confuse ProSpin with domestic spin-dry mop buckets advertised on television. Instead of the commonly used string deck mop, ProSpin comes with a commercial grade 18-inch flat microfiber mop head that can be removed and machine laundered hundreds of times.

B001080

- Unique 90° foldable frame to clean baseboards, wall-corners and stairs
- Easy conversion with the use of your foot to snap mop back into flat position
- The ONLY flat, folding microfiber pad that can be inserted into the spin dry basket and is totally touch-free!
- Offers safe, simple-to-use push/pull motion to spin basket and dry the mop
- Includes four swivel casters for easy maneuverability and transportation to and from the filling station.

PULLMAN-HOLT

ProSpin Professional Spin Mop Bucket

Features:

A specially designed microfiber pad with pockets sewn on each end, fits snugly onto the frame and is held firmly in place as you transition from general floor cleaning to specific 90 degree cleaning tasks.

Easy Conversion with the use of your foot to snap mop back into flat position

How To Tip: Use your foot to press one end of the hinged mop to a flat position, leave the other end in a 90 degree position, and now you're ready to clean the floor and baseboard at the same time.

Unique 90° foldable frame to clean baseboards, wall-corners and stairs

Can be inserted into the spin dry basket totally touch-free!

How To Tip: Simply place the mop in the basket, unlock the height adjustment knob and move the handle up and down. This plunger type motion creates tremendous centrifugal force in the spin basket and thoroughly dries the mop.

Important Safety Features!

Domestic mop buckets require the operator to lift their leg and push a foot pedal to spin dry the mop. This technique represents a major slip and fall risk, especially on a wet floor! ProSpin dries the mop without standing on one leg to activate a foot pedal. The operator simply uses the handle to spin the basket and dry the mop.

Finally, unlike domestic models, ProSpin includes four swivel casters for faster cleaning, easy maneuverability and transportation to and from the filling station
