

How to Use Your Rx Destroyer Liquid Formula

1

Remove liquid medication from vial, IV pouch, or other liquid container with syringe.

2

Empty unused or unwanted syringed liquid medications into Rx Destroyer bottle.

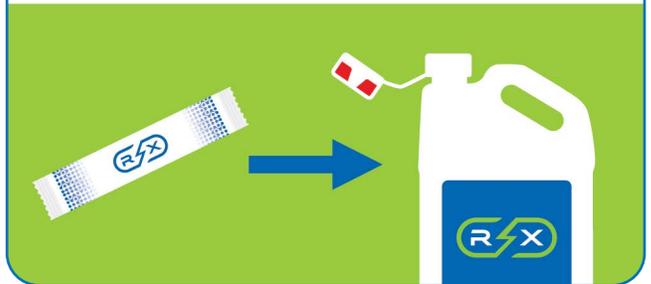

3

Secure cap back on the bottle and gently agitate. Continue to fill the bottle with liquid medications until contents reach 2" from the top.

4

When full, simply drop the sealed hardener pouch(es) into the bottle. Dust free formulation converts contents into solid gel in minutes.

5

When contents reach a gel consistency, follow applicable federal, state, local, and tribal laws & regulations for pharmaceutical waste disposal.
